

# Luxion KeyVR®

## VR was a challenge – KeyVR made it easy

### Luxion KeyVR® - Featured Highlights

**KeyVR is the quickest way to view your scene in virtual reality.**

Luxion have eliminated the complex setup and preparation so you can quickly and smoothly transport yourself into the scene with the click of a button.

#### Built for designers

KeyVR is unlike any other VR software. It doesn't require any convoluted development or programming.

With one click you can experience your design, materials, environment, or animations as if they are in front of you, around you, or in your hands.

#### Faster design insight

KeyVR puts you right in the scene and allows you, your team, or your customers to evaluate different materials under different lighting conditions. It provides faster design insight, eliminating costly mistakes, and even costlier manufacturing delays.

### Why use VR?

Virtual reality has gone beyond novelty. Companies around the world are using it to evaluate designs and bring products to market faster.

The learning curve, development needs, and hardware requirements are still a barrier to many. We set out to break that down, providing a one-click interactive VR experience, that is fast, easy, powerful.

### One-Click Solution for Interactive VR Experiences

KeyVR is simple. With one-click, go from KeyShot to KeyVR to explore your scene, or open a KeyShot .bip or .ksp file directly in KeyVR.

#### Prepare your scene

Import your model into KeyShot. Add any materials, environments, or animations you like and save your scene.

#### Start KeyVR

Press the KeyVR button on the KeyShot toolbar or launch KeyVR and open the scene directly.

#### Experience

View your 3D model in an interactive environment, change materials, choose lighting, and make design decisions faster.
